PERSONAL INFO

Born Jan 12, 2004

Age 22

Nationality Danish

WEB & BACKEND

Next.js React TypeScript

Node.js GraphQL

REST API Tailwind

DATABASE & CLOUD

PostgreSQL MongoDB

Supabase Firebase Redis

Prisma Docker Vercel

Cloudflare

3D & CREATIVE

Blender Three.js

3D Modeling Texturing

Rendering Animation

OTHER

C# Python Stripe

Resend Claude Code

GitHub UI/UX OpenClaw

EDUCATION

Digital Media

Roskilde Technical College
2022 — 2024

CV

PROFILE

Full-stack developer and 3D generalist focused on building things that **actually work** — from frontend to backend to deployment. No excuses, just results.

I work freelance as a full-stack developer and I'm an approved creator on [Superhive](https://superhive.com) (Blender Market). Alongside that I built [OpenClaw](https://philipsloth-portfolio.pages.dev) — an autonomous multi-agent AI system using Claude and other LLMs that fit the job, driven by cron jobs and heartbeats. Specialised agents with their own skills and guardrails handle research, project management, code, finance, leads, marketing, inbox and more.

EXPERIENCE

Freelance Full-stack Developer

2026

philipsloth-portfolio.pages.dev

End-to-end ownership of digital products — from architecture and data model through deployment and what comes after launch. I pick the right stack for the problem and ship work that holds up in production.

Blender Market Creator

2023

superhivemarket.com/creators/philipsloth

Eight Python-based Blender addons shipped on Superhive — including Slothmograph (Cinema 4D MoGraph for Blender), Sloth's Turntable-Control, Sloth Batch Render, Slothnodevault, custom pie menus for shading and LoopTools, Ngon Scout (QA) and Meshpy (geometry-to-Python). Deep grip on Blender's API and production pipelines.

AI Pipeline — OpenClaw

2026

[Independent project](#)

Multi-agent AI orchestration with Claude and other LLMs that fit the job. Cron-driven pipelines, heartbeat-monitored agents, scoped permissions and security rails built into every action — guardrails by design, not bolted on. Has shipped production work across my addons, websites and backend integrations through custom workflows that hold up under real use. Real customers, real revenue — not only portfolio demos.
